

Why execution breaks under pressure

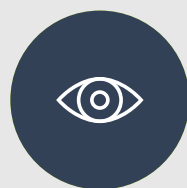

Turn supply chain disruption into coordinated action with Infios Archer™

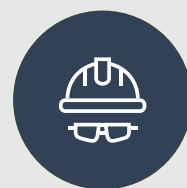

What's breaking?

Execution systems respond separately
Order, warehouse, and transportation systems operate independently.

Visibility does not create action
Systems may see disruptions, but can't act on them across inventory, labor and fulfillment..

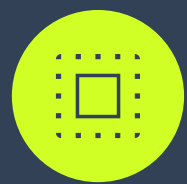

People have to coordinate manually
When systems don't act together, teams bridge the gaps through calls, follow-ups, and manual handoffs.

What changes with Infios Archer

Infios Archer turns disruptions into coordinated responses across order, warehouse, and transportation in real-time.

Infios Archer delivers proactive alerts, insights and guidance, so teams know what to do next.

Infios Archer relieves teams by automating workflows and cross-system hand-offs, with human oversight when needed.

How your business improves

WITH INFIOS ARCHER, TEAMS ACHIEVE:

Faster issue resolution

Fewer manual handoffs

More reliable customer promises

Higher team productivity

More speed, accuracy and control

Safe automation with oversight

Faster modernization
