

myShipINFO®

Infios's Freight Audit Payment solutions are powered by transportation intelligence.

myShipINFO powers Infios's Freight Audit and Payment solutions helping shippers optimize and improve their complex supply chain operations across all modes of transportation, to and from any location across the globe, in any currency or language.

Infios will audit every detail of the freight bill invoice, comparing the actual rates and accessorial charges billed to you with the rates in your tariff(s) on all domestic and international freight shipments. Our audit solution utilizes a call center to maximize parcel credits, which helps you receive 30 percent of credits that are denied by other carriers' automated systems. Infios is uniquely able to deliver optimal client results through an auditing team with decades of experience.

Key benefits

Transportation spend optimization

Reduces shipping costs

Account analysts

An extension of your team

Transforms data

Into actionable Intelligence

Financial complexity

Streamlined

Bill payments

On-time and transparent

Non-value-added workflows

Eliminated

Shipper of choice

Carrier relationships

Your customers delighted

Transit optimization

We audit over 5,000 carriers, all modes of transportation, transact more than 160 stable currencies and translate 14 languages in 100+ countries in myShipINFO to provide our clients comprehensive global coverage

Are you paying higher transportation rates than necessary that impact the bottom line?

Many companies are losing money paying unnecessary charges on their freight bills and using inefficient processes.

Finance professionals will have access to myShipINFO for purpose-built business intelligence and accurate, real-time transportation data from other supply chain systems (ERP, OMS, TMS, WMS) within a single portal to make informed decisions. The Infios team of experts transforms that data into actionable business intelligence that you can use to easily improve your operations.

Important features

- Business intelligence (BI) purpose built for transportation teams
- Helps achieve true optimization through a comprehensive solution
- Enables strategic transformation of your spend management process
- Incorporates customer-specific audit rules to increase controls and provide KPI reporting which details all activity
- Processes transportation invoices regardless of invoice method (paper, EDI, ODE or a template provided by Infios)
- Identifies duplicate billing, invalid base rates, invalid fuel and accessorial charges and parcel service level commitment failures
- Allows for robust exception management in the invoice payment process
- Carbon emissions reporting utilizes standards from EPA and IMF, providing transportation departments with measures and compliance reporting around sustainability efforts
- Reduces operational risk through market leadership

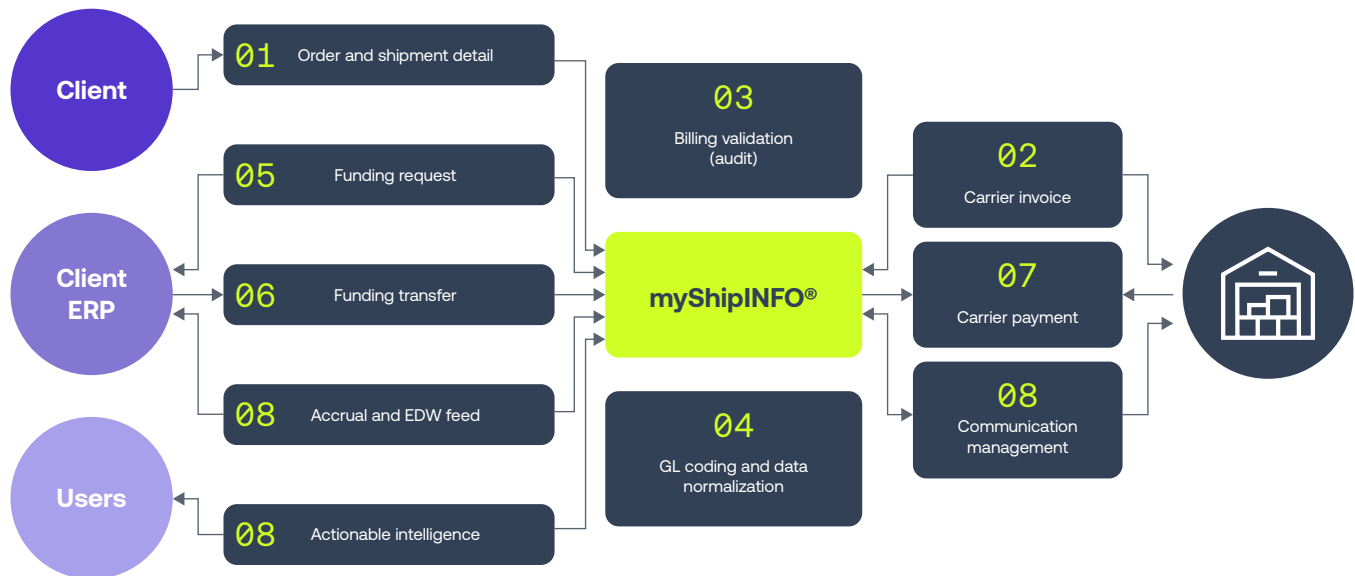

Implementation

Infios has domestic and global implementation teams. myShipINFO is cloud based, and new clients implementations take 4–16 weeks depending on complexity. It integrates data feeds provided by the carriers. Integrations with ERP, WMS, TMS and OMS are optional. Onboarding and training is available for clients' transportation spend professionals.

Customer Service

Our USA-based client and carrier help desk is available during normal business hours (EST) Monday through Friday excluding holidays.

Integration flow

myShipINFO in use

GNC

Infios Freight Audit and Payment enabled full visibility into GNC's global spend and transportation data. GNC accrued approximately \$4 million+ in savings, about 15.4% of the original annual baseline spend of over \$26 million.

GOAT

GOAT

As GOAT's business grew exponentially in both volume and complexity, they needed a partner who was able to translate carrier agreements into comprehensive simple rate structures. Working with Infios has exceeded the promised ROI and saved GOAT materially more in shipping costs compared to when they dealt with carriers on their own.

URBN

URBN selected Infios due to the vested commitment and interest from team members in helping their business achieve sustainable growth within the company. Since implementation, URBN has seen increased efficiencies in reporting, increased accuracy of reporting, as well as more reliable forecasting abilities.
